Elmer Akin, Office of Health Assessment
Stuart Perry, Air Programs Branch, APTMD

As you know, EPA has been working on a new model for streamlining and accelerating the Superfund program known as the Superfund Accelerated Cleanup Model (SACM). Region IV's plans for the implementation of SACM include an early enforcement/voluntary cleanup program. For this program, we have selected the Chevron site referenced above as a SACM - Early Enforcement/Voluntary Cleanup Pilot.

The Chevron Chemical Company site has been under investigation by EPA pursuant to the authority and requirements of the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA). EPA conducted a Site Inspection (SI) at the facility in June of 1989. Due to the high levels of pesticides and other organic compounds detected in the surface and subsurface soils, as well as the groundwater, the site was referred for emergency removal action. Removal of contaminated soil is near completion at the site; however, groundwater contamination has not been addressed.

As a pilot site in the SACM - Early Enforcement/Voluntary Cleanup Program, an RI/FS will be completed for the site under a 106 Administrative Order on Consent, and a Record of Decision will be developed to document the Agency's decision on the appropriate remedial/removal action. An HRS Documentation Package will be developed simultaneously with the RI/FS so that the site can be proposed for the NPL, if necessary. This process will result in significant time and resource savings to the Agency.

Attached is the July 2, 1990, Site Inspection Report and the December 1990, Contamination Assessment Report. Please review the material. I would like to have an initial kickoff meeting on August 12, 1992, at 1:00 PM in the Superfund Conference Room #1, first floor Courtland Building. The purpose of the meeting is to discuss the development of the scope of work for the Chevron site and to answer any questions concerning the SACM pilot.

If you have any questions, please contact me at X5065.
